

Company

Elemco has been in the business of real-time hands-on industrial control systems in the manufacturing and service industry for 30 years. All the systems are designed for optimum functionality, reliability, and simplicity.

Our approach to "design excellence" is one of listening first to its customer's needs, understanding their unique process, and providing a complete analysis and recommendation of the most cost effective technology available.

Elemco's extensive experience in diverse application fields and its staff's common sense approach to deliver user friendly systems has made it a preferred system integrator for a number of major cosmetic, distribution, pharmaceutical, and food processing companies.

Elemco Shop Floor Application

Elemco's Shop Floor application is a comprehensive software solution for tracking and validating material use from the time it is received to the time it is shipped. The application is comprised of a series of functional modules. Based on your company's requirements, the appropriate modules will be implemented to meet your needs. Shop Floor is a fully hosted web based system. The entire system can be operated through the use of your company's existing desk top computers and printers. The only requirement is an internet connection. There is no need for expensive servers or support personnel to operate the system.

System Functionality Overview

- Job quoting.
- Quality Control
- Material availability
- Records the arrival of material into the facility and generates the required labels.
- Calculates the jobs that can be run in a facility based on known bill of materials.
- Identifies materials that need to be retested prior to shop floor order's execution.
- The schedule system will identify jobs that are affected by inventory changes.
- Locates material manually or by using RF Scanners.
- Generates cycle count reports and bar coded labels.
- Produces daily production schedules.
- Displays the lines that are currently scheduled and orders being run on them.
- Tracks labor used on a particular production order.

Pricing

The cost of the system consists of two elements. The first is a one time implementation cost. This is based on the size and complexity of your operation. The second element is a monthly subscription fee based on the functionality required and includes full service hosting and support.

Training and Support

Elemco can handle all of your training and support requirements.
